

#### DISINFECTION

UV light in trash bin working by timer

#### SOLAR ENERGY

Powered by clean solar energy

#### USB CHARGER

charge your phone via USB-24hours per day

#### INDUCTIVE CHARGER

Equipped with wireless chargers

#### FILLED ALARM

LED strip light changes from green to red color when trash is filled

#### ECOLOGY

Decreasing energy consumption and thus CO2 emission

#### WIFI INTERNET

Free Internet access while charging

#### LED LIGHT

Embient light works automatically after sunset.

We Don't Make The Future, We Make The Future Better

## Adlis/Weiyin Smart Furniture Operation Manual

## Assembly and Configuration

1. When the cargo is on the site, open the top lid of wooden package first and check whether all the parts inside are well laid. If any parts are sloping after transportation, make sure they are put in good position then open the sides of the wooden package.
2. When opening the foam and film outside the products, be careful in case the knife scratches the products inside.
3. Assemble the products according to Adlis/Weiyin installation manual.
4. After turning on the battery switch, take off the film covering the solar panel.
5. Some products need to connect the solar panel wires, pls make sure the different colors are connected in the right way, red and brown: positive, black and blue: negative.
6. Some products have hybrid energy, connect AC power in matching color to the wires. Brown: positive, blue: negative. Make sure about waterproof issue when connecting AC electricity inside the products.
7. For some products with more complicated wire connection, follow the stickers on the wires and connect in matching sequence, "1-1", "2-2", "3-3", "4-4", "5-5", "6-6", "7-7".
8. If everything is connected correctly, all the indicators inside are in green color, including Adlis/Weiyin smart motherboard. If red color on the motherboard, it means some problem with the load device. If green color on the motherboard, but not working properly, plug out and in several times in case the plug gets loose during transportation.
9. For more help and support, pls contact Adlis/Weiyin team via [sales@solarbenchchina.com](mailto:sales@solarbenchchina.com).

## Diagram Of Wire Connection

## Load Working Mode

### Solar bench/table/bus shelter/charging station

- 1) Ambient light is controlled by light indicator and PIR sensor. It works automatically after sunset and switches on when people go nearby. Working mode can be changed on APK with serial communicator. See detailed instruction on Annex I.
- 2) USB chargers are compatible to all mobiles, while wireless chargers are only applicable to some mobile phones, inside which has its own wireless receiver, such as iPhone 8, 8 plus, X, XS, Max, 11, 12, Huawei Mate 30, Mate 30 Pro, P 30 Pro, P40 pro, and Samsung etc.
- 3) Bluetooth speaker connects with mobile with name "WY".
- 4) WiFi router works with IOT 4G sim card or local network cable. WiFi name: 4G-CPE-\*\*\*\* Password 1234567890

### Solar trash bin

- 5) LED light is green color and changes to red color when the trash fills up.
- 6) Automatic sensor opening door works automatically when the system is powered on.
- 7) UV disinfection light works with timer or optional Adlis/WeiYin smart box.

### OPTIONAL MORE FEATURES

## LED Indicators

Indicator	Color	Status	Instruction
PV	Green	On Solid	PV connection normal but low voltage (irradiance) from PV, no charging
	Green	OFF	No PV voltage (night time) or PV connection problem
	Green	Slowly Flashing (1Hz)	In charging
	Green	Fast Flashing (4Hz)	PV Over voltage
BATT	Green	On Solid	Normal
	Green	Slowly Flashing (1Hz)	Full
	Green	Fast Flashing (4Hz)	Over voltage
	Orange	On Solid	Under voltage
	Red	On Solid	Over discharged
	Red	Fast Flashing (4Hz)	Battery Overheating Low temperature
	Charging (green) and battery indicator (orange) flashing simultaneously		System voltage error

※When the battery type is Lithium Battery, the controller does not recognize the system voltage automatically.

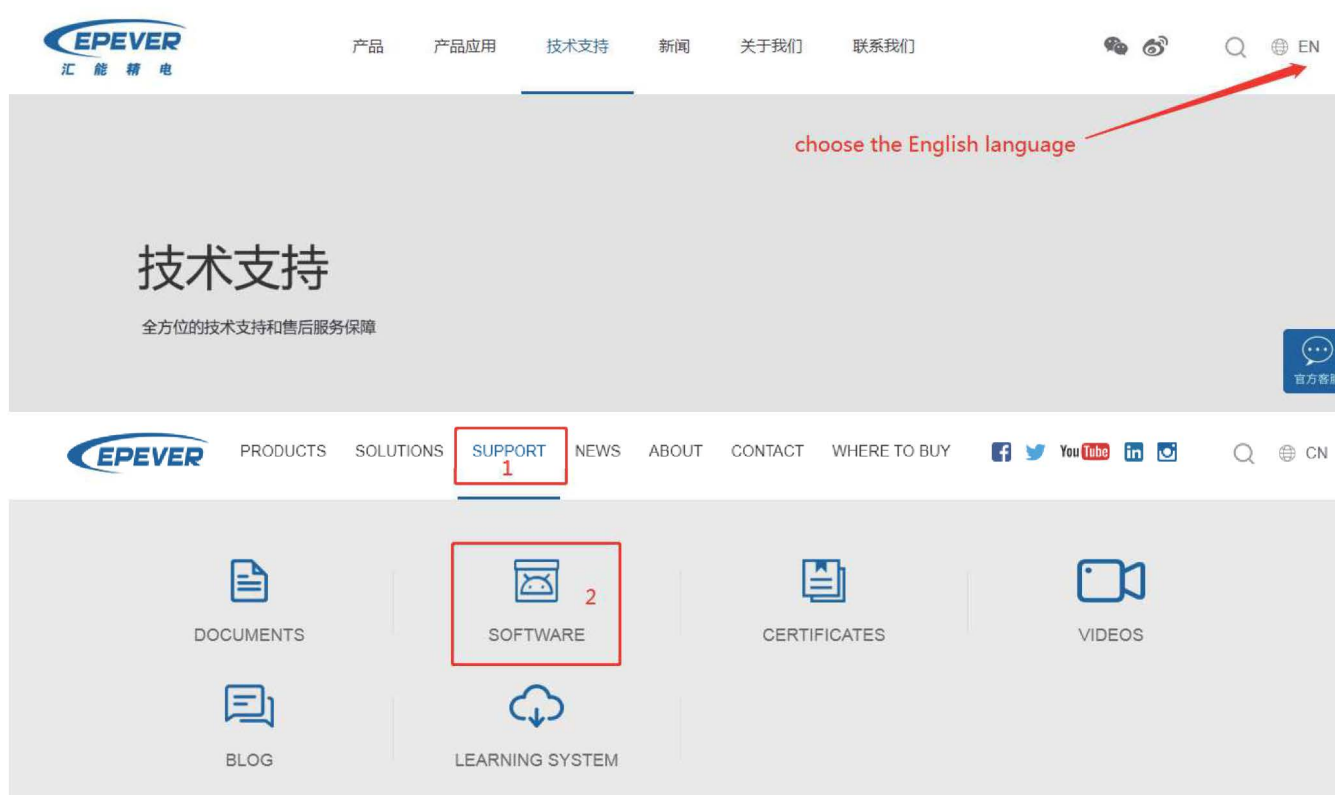

## Trouble shooting

No.	Faults	Trouble shooting
1	PV indicator is off during daytime with enough sunshine.	<ol style="list-style-type: none"> <li>1. PV cables are loose.</li> <li>2. PV and battery cables are connected oppositely.</li> <li>3. Solar panel is damaged.</li> </ol>
2	Both PV and battery LED indicator are off.	<ol style="list-style-type: none"> <li>1. Check during daytime whether PV indicator works properly.</li> <li>2. Ensure the problem is battery after confirming solar panel is working properly.</li> <li>3. Use a multimeter to check whether battery is low electricity, if yes, use a special charger to charge and activate the battery.</li> </ol> <p>If the battery cannot be activated, it is damaged and needs to be replaced.</p>
3	Battery LED indicator is green fast Flashing	Battery over voltage, parameters of the controller needs to be reset, see Annex I
4	Battery LED indicator is red all the time	Battery over discharged due to no enough sunshine, and will get back to normal in sunny weather. In case of continuous rainy weather, it is recommended to use a special charger to charge the battery.
5	Battery LED indicator red flashing	Battery overheating, the controller will automatically turn the system off, till the temperature reduce below 50° C.
6	Load device has no output voltage	<ol style="list-style-type: none"> <li>1. Reset timer.</li> <li>2. Check the load cable connection and clear the short circuit fault point</li> <li>3. Restart the PV controller.</li> </ol>
7	LED light or LED advertising display not working in the evening	<ol style="list-style-type: none"> <li>1. Check and confirm all wires and ports are connected tightly.</li> <li>2. Check and ensure human body sensor is not damaged.</li> <li>3. Low battery, follow step 4.</li> </ol>
8	USB does not charge	USB port is damaged, change the new one.
9	WiFi disconnected	<ol style="list-style-type: none"> <li>1. Check and ensure WiFi device is with SIM card inside.</li> <li>2. Check and ensure SIM card is with sufficient flow.</li> </ol>
10	Bluetooth module with no sound or not working properly	<ol style="list-style-type: none"> <li>1. Low battery, follow step 4.</li> <li>2. Bluetooth module is damaged and needs to be replaced.</li> </ol>
11	Short working time of all components	<ol style="list-style-type: none"> <li>1. Not enough sunshine, or solar bench is put in the shadow.</li> <li>2. Solar panel is too small and cannot support the load.</li> </ol>

## Adlis/Weiyin MPPT Controller APK Operation Manual

NOTE: Please download APK on the web: <http://www.epsolarpv.com.cn/downsoft.html>

Monitor and configure EPEVER solar charge controllers with RS485 communication feature via eBox-WiFi-01 or eBox-BLE-01 on Android devices for the lithium battery.

Compatible Products:

Tracer-AN, Tracer-BP, Tracer-BPL, TRIRON, XTRA

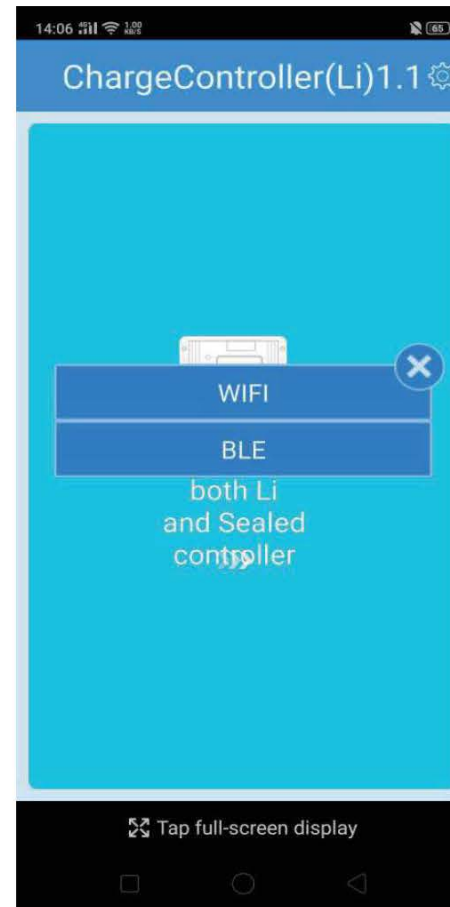

1、 Make sure the battery power is switched on and the wires are all connected correctly to the controller.

2、 Connect the controller and serial communicator, power indicator on the serial communicator is on when connected correctly.

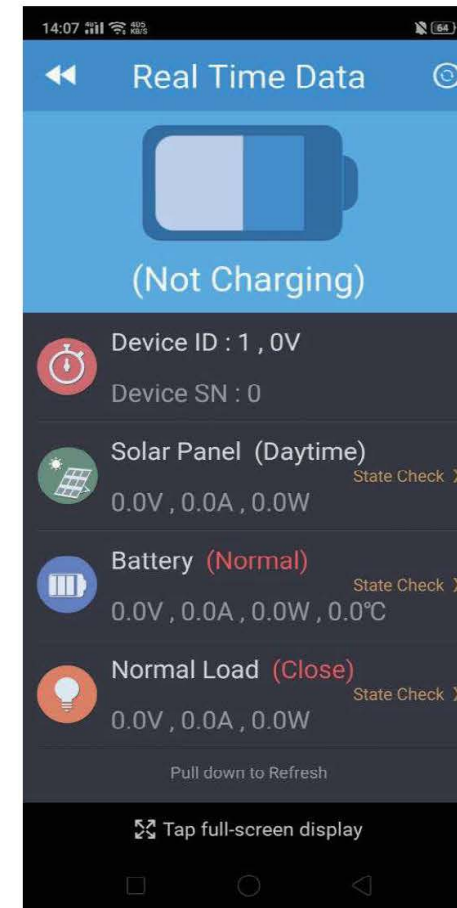

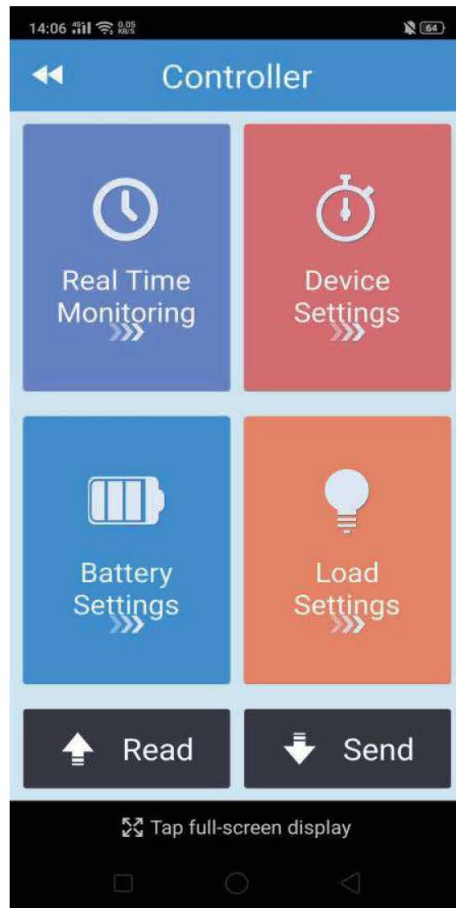

3、 Open APK on phone and select the corresponding communication method of the communicator. For WIFI option, make sure mobile is connected on WiFi. For Bluetooth option, search bluetooth signal then connect. Link indicator on the serial communicator is on when connected correctly.

4、 Enter the control page.

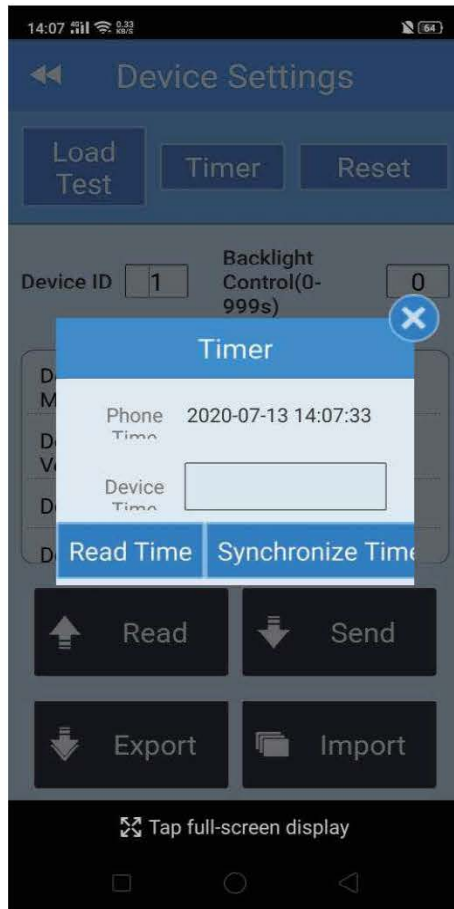

5、 Real-time monitoring  
Read real-time data of power supply system and system operation status

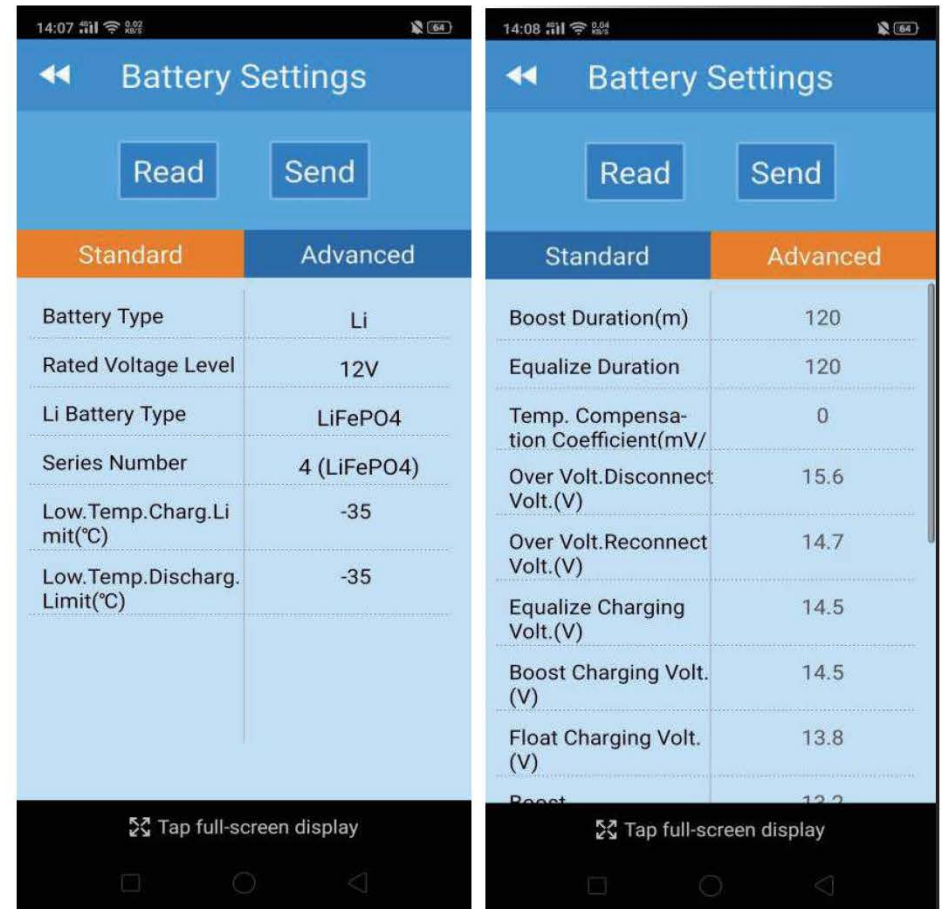

## 6、 Device parameters

Read and input system data, users only need to update the corresponding regional time to complete the clock setting of the controller;

## 7、 Battery setting

Configure the battery parameters currently used. Read the parameters of the controller before changing the parameters, and then change the required parameters (please do not change the parameters without checking with the factory).

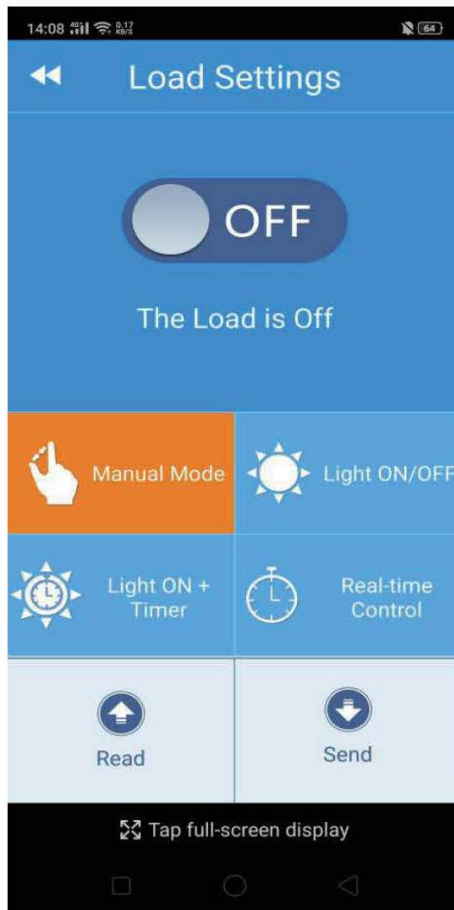

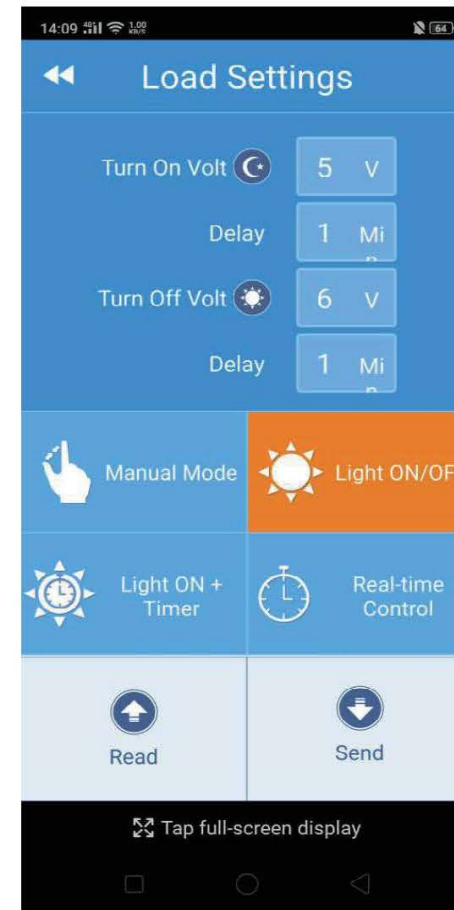

## 8. Load setting

Four working mode for choice.

1) Manual Mode - Manual control On/Off switch

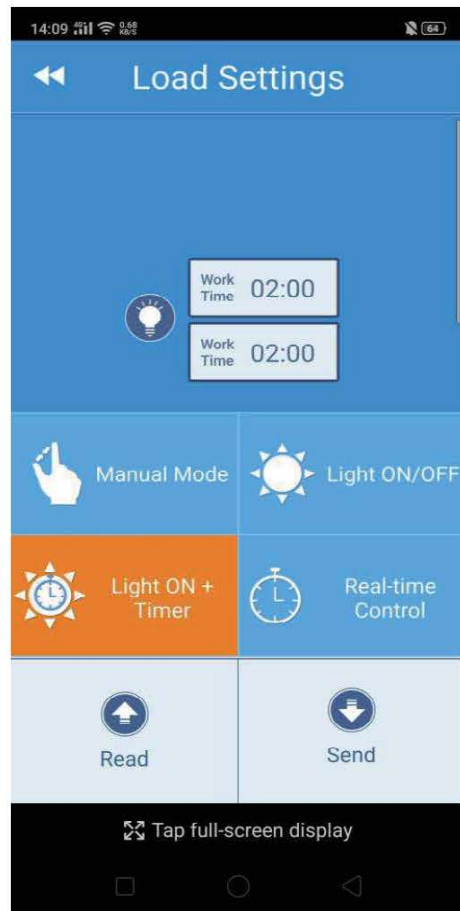

2) Light ON/OFF - automatically off during the day and automatically on at night, when with sufficient battery electricity

### 3) Light on + timer

Voltage of light on/off control and controller time needs to be configured first, then working hours. Work Time 1 refers to how many hours the light is on after dark, and Work Time 2 refers to how many hours light is on before dawn. This time period needs about 4 days for the controller to automatically adjust. The longer the period, the more accurate it is. (Notice: timer needs to be reconfigured when the battery runs out of electricity power.)

### 4) Real-time Control - Configure the controller time first, and then working period on 24-hour system, two periods available. (Notice: the timer needs to be reconfigured when the battery runs out of electricity power.)

Notice: Click " Send" after configuring, and click "Read" to double check whether the configuration is recorded correctly.
